Classification — Slider Types

*We can replace the pull according to your requirements.

Auto-lock Slider

Automatically locks when no force is placed on the pull.

Semi-lock Slider

When the pull is lowered, it locks. When the pull is raised, it unlocks.

Non-lock Slider

The pull does not lock at any position on the body.

Reversible Slider

The pull moves along a rail. The zipper opens and closes on both sides.

Invisible Slider

Slider for invisible zipper.

Double Pull Slider

Non-lock slider with 2 pulls.

Plastic Zipper

Lovely  Babies

Plastic Zipper

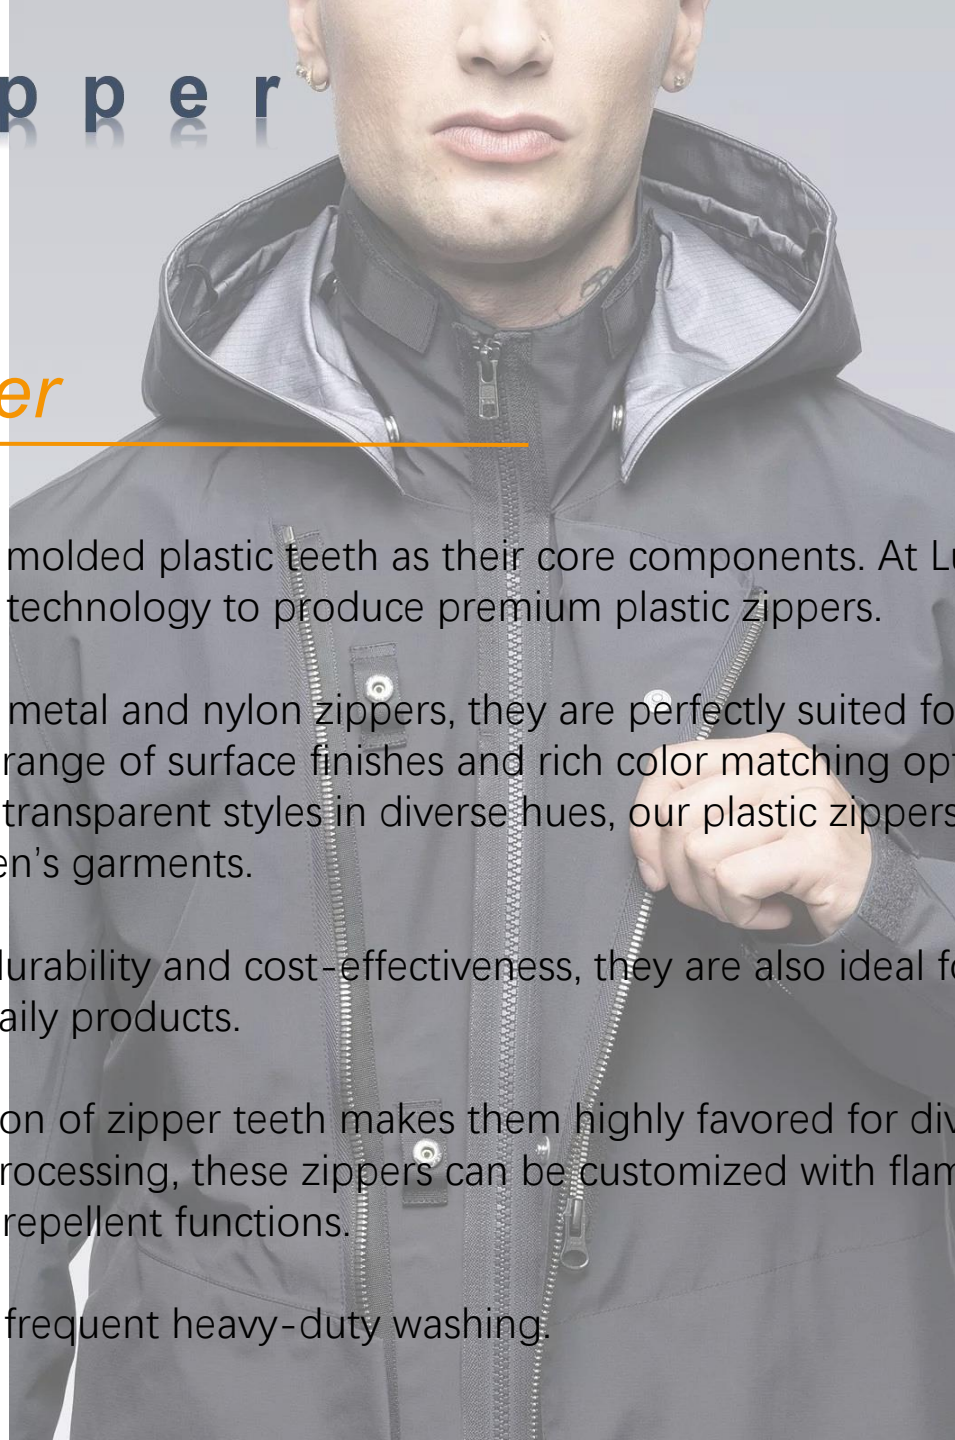

Plastic zippers feature molded plastic teeth as their core components. At Luxzipper, we adopt cutting-edge industry technology to produce premium plastic zippers.

Lighter in weight than metal and nylon zippers, they are perfectly suited for lightweight apparel. Boasting an extensive range of surface finishes and rich color matching options, including fluorescent tones and transparent styles in diverse hues, our plastic zippers are widely applied to sportswear and children's garments.

Combining excellent durability and cost-effectiveness, they are also ideal for luggage, outerwear, workwear and other daily products.

Easy color customization of zipper teeth makes them highly favored for diversified design needs. Through specialized processing, these zippers can be customized with flame retardant, waterproof and water repellent functions.

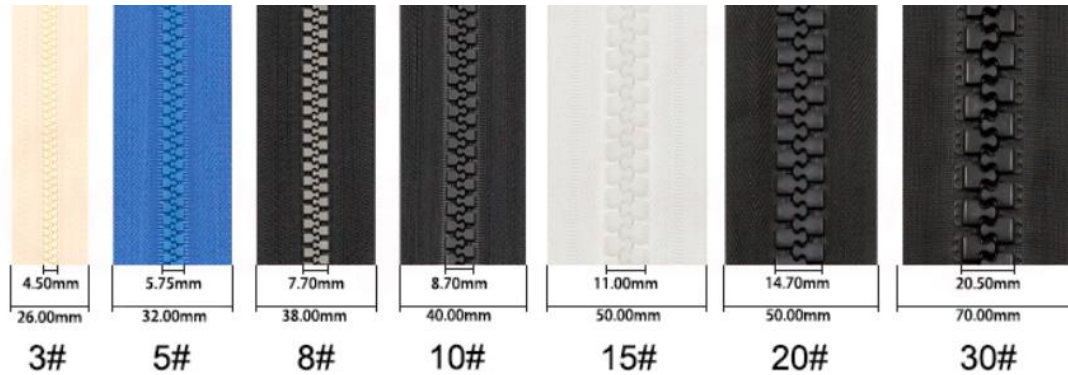

Note: Not suitable for frequent heavy-duty washing.

Metal Zipper

Lovely  Babies

Metal Zipper

Our metal zippers are highly prized in the market for their high resistance and reliability, especially in those applications where zippers are placed under high stress, giving the brands who use our zippers the confidence they need that their products will not suffer due to the use of poor-quality parts that may affect their reputation with customers.

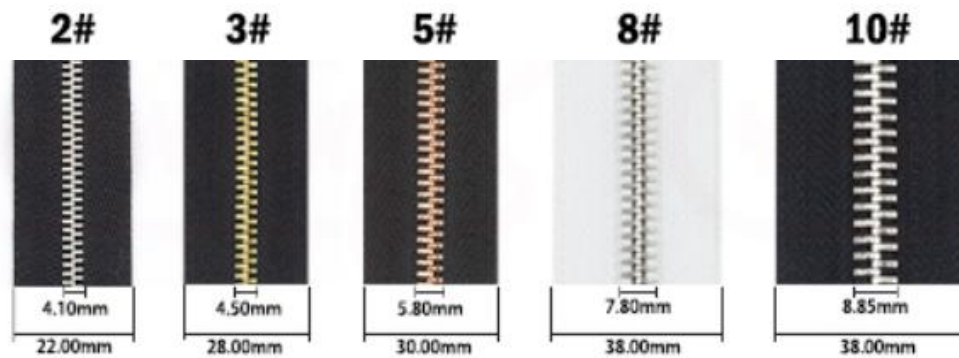

Zippers manufactured with double-stitched polyester or cotton tape offer greater strength. Although they are recommended for lightweight garments and light-duty processes, these zippers feature excellent finishes, standing out for the strength of their alloys and the precision of their gauges, compared to other, similar zippers. They are widely used in cotton garments, pants, footwear, and leather goods.

Nylon Zipper

Lovely  Babies

Nylon Zipper

Nylon coil zippers, also known as polyester or nylon zippers, are highly versatile zippers due to their characteristic light weight and high strength and efficiency. They are used in a wide variety of applications, such as everyday and athletic wear, footwear, leather goods, luggage, and more, making this zipper the most widely used.

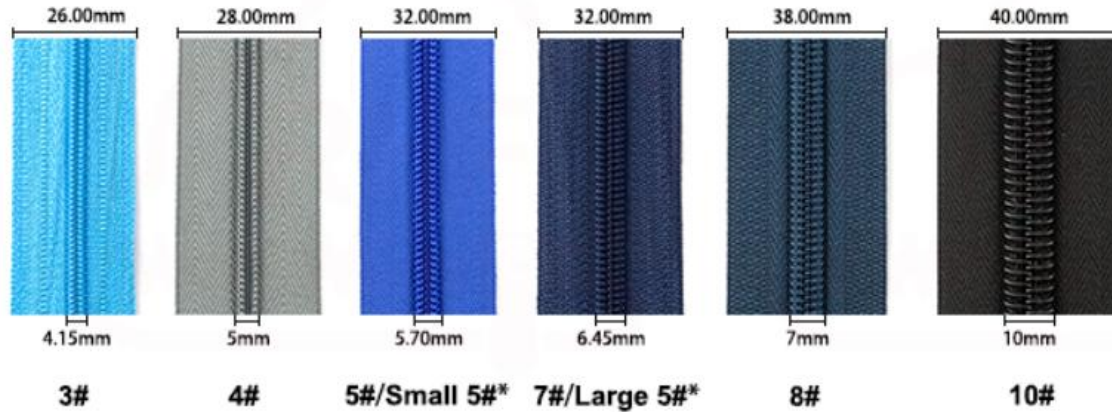

The teeth of this zipper are flexible and adjustable, thanks to their high elasticity. Another advantage of this zipper is its light weight, manufactured with a 100% polyester tape and coil, which follows the natural drape of fabrics once the garment is completed.

Using different types of processes, this zipper can be made flame retardant, waterproof, and water-repellant, among other properties

Reverse Nylon Zipper

Lovely  Babies

Reverse Nylon Zipper

Reverse nylon coil zippers are highly versatile zippers due to their characteristic light weight and high strength and efficiency. They are made with 100% polyester tape and coil. Their main difference from woven nylon coil zippers lies in the fact that the nylon elements are arranged in reverse, hiding the teeth inside the garment and making for a smooth and refined final appearance. To achieve this, the slider body must be designed specifically for this reverse arrangement of the elements.

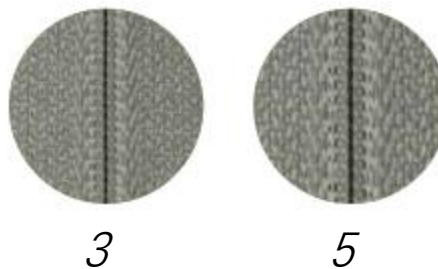

This type of zipper is ideal for applications that require a smooth, detail-oriented finish, reducing possible friction with the zipper in the use of the garment, as in the case of shirtfronts and pockets in athletic clothing. Because it is a very lightweight zipper, it follows which follows the natural drape of fabrics once the garment is completed.

Using different types of processes, this zipper can be made flame retardant, waterproof, and water-repellant, among other properties.

Invisible Zipper

Invisible Zipper

Invisible nylon zippers, also known as invisible polyester or nylon zippers, are zippers in which the front elements are completely concealed by the zipper tape, making them completely undetectable.

The nylon coil elements are hidden on the reverse side of the zipper, and the top and bottom stops are welded using polyester monofilament, as are the coil elements.

A properly sewn invisible zipper camouflages itself, appearing to be part of the seams, making it ideal for application in lightweight garments, skirts, pants, and dresses.
